Chloride Management

Contact information and specifications

Minnesota Pollution Control Agency

MPCA recommends a low-salt diet for Minnesota waters. Doctors tell us to stick to a low-salt diet. Our lakes and streams should follow the same advice. When winter comes and snow and ice buildup on Minnesota roads, parking lots, and sidewalks, one of the most common reactions is to apply salt, which contains chloride, a water pollutant.

<http://www.dnr.state.mn.us>

Invasive species are species that are not native to Minnesota and cause economic or environmental harm or harm to human health. Minnesota waters are threatened by aquatic invasive species. It is illegal to transport any aquatic plants, zebra mussels, New Zealand mudsnails or other prohibited invasive species, or to launch a boat or trailer with these species attached.

Deephaven, MN 55391

<http://www.minnehahacreek.org/grants>

One of the most significant ways the Minnehaha Creek Watershed District (MCWD) partners with residents, business owners, and local governments to improve water quality is through a wide variety of grant programs. The programs offer financial and other assistance to develop good solutions that will improve water management and quality, while helping property owners enjoy their property to the fullest extent possible.

Grants are currently available for replacing failing septic systems, installing rain gardens or improving the shorelines of a nearby stream or lake.

**Minnesota Board of Water and Soil
Resources**
